A closing price will be calculated for the investment basket on each banking day. The value of redemptions made from the investment basket will be determined per order in accordance with the market situation at the time of redemption.

• **The annual management fee of the investment basket** is 0.3%.

## Definition of the investment basket

The investment basket is an investment object owned by Mandatum Life Insurance Company Limited (hereinafter "Insurance Company") that may be linked to unit-linked life insurance and capital redemption contracts (hereinafter collectively "Contract") specified by the Insurance Company, where the assets of the investment basket are invested in fixed income investments according to the investment strategy.

The investment basket does not distribute its return. Instead, any eventual return increases the value

of the unit. The return of the investment basket depends on the performance of the assets in the investment basket.

Unless otherwise provided in these rules, the regulations concerning investment objects in the terms and conditions of the Contract apply to the investment basket. A review of the investment basket is available by request from the Insurance Company.

## The investment strategy of the investment basket

The objective of the investment basket's investment activities is to achieve an annual yield on the investment basket's assets that clearly exceeds the low credit risk money market return. The Insurance Company is not liable if the objective of the investment basket's investment activities is not attained.

The securities selected for the basket (incl. the derivatives position of the investment basket) may correspond to 0% to 100% of the investment basket's net assets. The investment basket's assets can be invested in deposits, money market instruments, bonds and other fixed income investments such as, for example, but not limited to, securitised loan portfolios, standardised and non-standardised derivative contracts and in units of an investment basket, fund or other collective investment undertakings. The foreign exchange risk can be hedged according to the portfolio manager's judgement at any given time.

Up to 10% of the basket's assets may be invested in the securities of any one issuer. Such investments in the securities issued by the same issuer that exceed 5% of the investment basket's assets must not exceed 40% of the investment bas-

ket's assets. This limitation does not apply to deposits, to the units of an investment basket, funds or collective investment undertakings nor to investing in such non-standardised derivative contracts in which the counterparty is a credit institution domiciled in the European Economic Area or in a member state of the OECD.

The total counterparty risk for the same issuer's securities, the deposits accepted by the corporation in question and such non-standardised derivative contracts that cause the investment basket a counterparty risk concerning the corporation in question may not exceed 20% of the investment basket's assets. However, contrary to the above, all of the assets of the fund, 100%, may be invested in bonds issued or guaranteed by a single EU country, or the municipality or joint municipal authority of an EU country or OECD country (whose credit rating for long-term debt is at least Moody's Baa3 or S&P's BBB-, in other words Investment Grade), if the investments are made in at least six separate issues and no more than 30% of the investment basket's assets are invested in a single issue.

Contrary to the above, of the investment basket's assets, 0–100% can be invested in the units of the same investment basket, fund or other collective investment undertaking, provided that the investment baskets, funds and collective investment undertakings cannot, in accordance with their rules or by-laws, invest more than 35% of their assets in the securities of a single issuer in any situation.

The investment basket's interest rate risk is monitored on the basis of the modified duration of investments, which varies between 0.00–2.00 years.

The foreign exchange risk component of investment instruments in the investment basket, other than those denominated in euros, may

be managed with currency derivative contracts (both standardised and non-standardised). The currency-specific foreign exchange risk of the investment basket may not exceed 100% or be less than 0% of the market value of the currency-denominated investments for the currency in question.

Lending and repurchase agreements may be made on investments in the investment basket. The market value of investments given as loans may not exceed 30% of the market value of the assets in the basket.

The collateral requirement of derivatives contracts, repurchase agreements and borrowed investments may not exceed 75% of the market value of the basket.

## Target market allocation

The investment basket's investment objects consist of various fixed income investments, such as loan portfolios, either directly or through selected funds. Limited liquidity and a floating interest rate may be typical for these investments. The securities and credit ratings of the investments are determined, at any given time, based on the investment policy of the selected fund. On the part of the investment basket's direct investments, the credit ratings must be at least AA- or similar according to a respected credit rater (such as Standard & Poors) at the investment date.

The base currency of the investment basket is the euro. However, investors bear the foreign exchange risk of investments other than euro-denominated investments, to the extent that the foreign exchange risk has not been hedged.

## The investment basket's risk profile

The investment basket's return risk is typical of diversified credit risk fixed income investments and its capital risk is typical of limited liquidity fixed income investments. The investor incurs the risk that the

investment does not produce a return. In addition, the investor may lose all or part of the capital he or she has invested in the investment basket. The investment basket does not have capital protection.

Due to the limited liquidity typical for the investment basket's investments, the investor must not be dependent on the daily liquidity of the investment he or she has made.

If the investment basket includes investments other than euro-denominated investments, changes in exchange rates may affect the performance of the investment basket.

The investment basket's terms and conditions describe the investment basket's risk factors that affect its investors.

The investment basket is not covered by the Investors' Compensation Fund or the Deposit Guarantee Fund.

## Targeted investors

The investment basket suits investors who seek higher returns than those typical for normal money market investments and accept the risk typically associated with low credit risk investments.

## Investment basket's fees and expenses

The annual management fee of the investment basket is 0.3%. The management fee of the investment basket and expenses associated with investments, including trading costs and any taxes and other public charges will be deducted daily from the value of the investment basket when the value of the unit is calculated; they will not be charged separately. The fees charged by any mutual funds, investment baskets and other instruments in the basket will also be deducted. These fees are taken into account in unit value calculations.

## Calculation of the investment basket's value

The value of the investment basket is calculated by deducting the liabilities of the investment basket from its assets, including management fees and expenses associated with investments. The securities, money market instruments and derivative contracts are valued at the current market value. Securities for which a reliable market value is not available are valued according to objective criteria. The value of the investment basket is expressed in euros.

A closing price is calculated for the investment basket on the days that Finnish deposit banks are generally open (banking days). Based on any changes, market disturbances or other similar reasons possibly affecting the investment basket's investments, the Insurance Company can interrupt the calculation of the investment basket's value until the calculation of the value can be carried out normally.

## Calculation of the unit value of the investment basket

The unit value of the investment basket is calculated by dividing the value of the basket by the number of investment basket units in circulation. The unit value of the investment basket may be divided into fractions. An investment basket unit comprises ten thousand (10,000) fractions of equal size.

The latest unit value of the investment basket is available from the Insurance Company and on the Insurance Company's website.

## Investment basket's unit subscription, redemption and associated restrictions

The subscription of the investment basket's units means the tying of a new payment under the customer's Contract or of already existing savings to the value of the investment basket's unit. The redemption of the investment basket means the withdrawal of the savings tied to the Contract's investment basket or their transference to another investment basket or some other investment object. The Insurance Company can decide the minimum number of units or the minimum amount in euros to be subscribed for or redeemed at one time.

The Insurance Company is entitled to refuse subscriptions for the investment basket's units. Policyholders are entitled to withdraw their savings in the investment basket in accordance with the terms and conditions of the Contract.

The Insurance Company is entitled to refuse a subscription assignment if it has not been provided with the required information for carrying out the subscription. The Insurance Company can provide more detailed information about how the subscription for units is carried out overseas or in a currency other than in euros.

The redemption value of the investment basket unit is determined according to the exchange rate for the day on which the required sales of the investment objects have been registered and taken into account in the calculation of the investment basket's value. The value of redemptions made from the investment basket will be determined per order in accordance with the market situation at the time of redemption. Redemption assignments will be fulfilled in the order of arrival. The redemption value is credited to the Investment Contract once the redemption has been completed at the earliest on the banking day following the redemption date.

The redemption assignment can only be cancelled with the approval of the Insurance Company. The Insurance Company is entitled to restrict withdrawals due to market disturbances or other similar reasons.

## Termination of the investment basket

The Insurance Company is entitled to terminate the investment basket. When the activities of the investment basket end, the policyholder must notify the Insurance Company, within a reasonable period assigned by the Insurance Company, which investment object's performance he or she wants the savings to be tied to. In case the policyholder does not do this, the Insurance Company is entitled to transfer the investment savings tied to the basket to other investment objects of its choice.

## Ownership of the investment basket and its units, and rights to them

The policyholder and beneficiaries do not have title or other rights to the investment basket linked to the Contract or to its units. The Insurance Company holds the title of the units of the basket and the investment instruments belonging to the basket linked to the Contract.

## Changes concerning the investment basket

The Insurance Company is entitled to change the portfolio manager of the investment basket and make changes in the rules of the investment basket. The Insurance Company will notify the policyholders of changes.

## Restrictions on actions concerning investment baskets

The Insurance Company is entitled to restrict investment basket unit redemptions and subscriptions in case the restriction is deemed necessary to protect the interests of other policyholders.

## Taxes and payments to authorities

In case the investment basket or investment objects in the basket are subject to indirect taxes under a law or an order issued or other fees imposed by the authorities, and which are payable by the Insurance Company, the Insurance Company is entitled to charge the corresponding sum from the investment basket.

## Due dates

If a due date referred to in these rules is not a banking day, the due date in question will be considered the first banking day following the due date.

## Risks associated with the investment basket

### MARKET RISK

Investment objects are affected by market risk, i.e. risk which is caused by general economic development, in other words factors that affect the financial position of issuers and/or that the value of the investment changes as a result of changes in the economic outlook.

### RETURN RISK

The performance of the investment basket is dependent on the performance of the target market, which may vary during the investment period. No guarantees can be made concerning the performance of the target market.

The past performance of investments is no guarantee of future performance. Investing in the investment basket is not the same as investing directly in the target market.

### INTEREST RATE RISK

Interest rate risk results from changes in the value of the invest-

ment basket due to a change in the market interest rates.

#### **CREDIT RISK**

Credit risk means a loss or the weakening of the financial position due to the fact that the issuer of a security or other debtor fails to meet his or her obligations. If the credit risk materialises, the investor bears the risk of losing the investment entirely or in part.

#### **COUNTERPARTY RISK**

Counterparty risk arises due to the other party in a financing or derivative contract and materialises if the counterparty is unable or unwilling to meet his or her obligations. If the counterparty risk materialises, the market value of the contract concluded with the counterparty is subject to risk. The investor bears the risk of losing the investment entirely or in part if the counterparty risk materialises due to the insolvency of the derivative counterparty prior to the redemption of the investment.

#### **FOREIGN EXCHANGE RISK**

If the investment objects include investments other than euro-denominated investments, changes in exchange rates may affect the performance of the investment object.

#### **LIQUIDITY RISK**

The markets' liquidity risk means that investments cannot be or cannot easily be realised or covered at the current market price or that a value cannot be determined for the investments due to the markets' lack of depth or because the mar-

kets are not working due to some kind of disturbance. The value of an investment may need to be defined in an exceptional manner at an exceptional time as the result of a market disturbance.

## **Risks and observations related to unit-linked insurance**

Risk is always inherent in investment activities. The performance of unit-linked insurance policies and capital redemption contracts is based on the performance of the investment objects selected by the policyholder, such as that of investment baskets, mutual funds, indices, currencies, commodities or equities. The value of the investment objects may rise or fall and the policyholder bears the risk of the financial consequences of his or her investment decisions and of losing his or her insurance savings. The past performance of investments is no guarantee of future performance.

The information and calculations concerning the returns, fees and expenses for investment objects do not take into account the expenses for the insurance and capital redemption contract.

Policyholders independently decide on the selection of investment objects in accordance with their own investment objectives, and bear the risk of a decrease or loss in the value of the insurance savings.

Neither the Insurance Company nor its agents are liable for the performance of the investments, or the selection of the investments linked to the insurance policy.

The Insurance Company may change the investments or the wealth manager responsible for the investments that can be selected for an insurance policy during the validity of the insurance policy.

Information on investments and related matters is supplied for information purposes only, and cannot be construed as a recommendation to subscribe for, hold or exchange certain investments, or to carry out any other actions affecting the performance of the insurance.

Prospective policyholders must carefully familiarise themselves with the terms and conditions and brochures relating to the insurance and investments before taking out or changing an insurance policy or selecting or changing investments.

Changes in legislation, other regulations and official procedures or the decisions of courts of law can affect the business, financial position and performance of the Insurance Company as well as the market value of the investments in the investment basket.

Additionally, the investor bears the risk of changes in taxation affecting the insurance products.

The insurance policy or capital redemption contract is granted by and the investment basket is offered by
